PROFESSIONAL SUMMARY

AI Engineer and Data Scientist specializing in LLM-powered systems, agentic workflows, and distributed AI pipelines. Experienced in building production-grade ETL workflows, RAG, multi-agent, and NLP systems integrated with real-time event-driven architectures across multi-cloud environments. Strong foundation in machine learning, knowledge graphs, and translating complex data into measurable business value.

TECHNICAL SKILLS

Programming & Query Languages: Python, SQL, Graph QL, Log QL

Big Data & Data Engineering: Pyspark, Databricks, Apache Pulsar, ETL Pipelines, Batch Processing, Data Pipeline Development, Apache Airflow

Databases & Data Warehousing: PostgreSQL, Neo4j, VictoriaMetrics, ChromaDB, FAISS

LLM & Agentic Systems: Agentic AI, RAG, LangChain, LangGraph, LlamaIndex, LiteLLM, Ollama, A2A, MCP, AG-UI, Prompt Engineering

LLM Evaluation: Langsmith, Ragas

ML/NLP: Supervised & Unsupervised Learning, Transformers, Embeddings, Hugging Face, SentenceTransformers, GLiNER, NLTK, spaCy, Scikit-learn, Feature Engineering

Backend & APIs: FastAPI, Flask, REST APIs, Microservices, Async Processing, SQLAlchemy, ML Flow

ML / NLP Libraries: Hugging Face Transformers, SentenceTransformers, GLiNER, NLTK, spaCy, Scikit-learn

Data & Analytics: Pandas, NumPy, Power BI

Cloud & DevOps: AWS, GCP, Azure, Docker, Kubernetes

Other: HTML, CSS

WORK EXPERIENCE

Manifest IT (Sequoia Capital Startup)

Data Science Intern | Nov 2024 – June 2025 → *Junior Data Scientist* | July 2025 – Present

Progressed from intern to full-time, owning end-to-end design, development, and deployment of production AI systems used by SRE and DevOps teams across multi-cloud environments. Built LLM-driven platforms for incident intelligence, change traceability, and automated cloud remediation; implemented multi-LLM routing (LiteLLM) balancing internal hosted models (Gemma 3:12B) and external APIs for cost, latency, and reliability.

AI-Powered Incident Root Cause Analysis System

- Built an AI powered automated RCA system correlating alerts, metrics, logs, and changelogs across 100+ services, reducing incident triage time from 30+ mins to near-zero.
- Designed LangGraph orchestration pipeline with 25+ nodes for conditional routing, multi-step LLM calls, and structured extraction; supported both event-driven (Apache Pulsar) and API-based workflows.
- Developed hybrid data layer (PostgreSQL + Neo4j + VictoriaMetrics) enabling cross-source correlation at the business-service level.

Change Traceability System (Approved & Unapproved)

- Built event-driven system linking change logs from 20+ providers to service requests using LLM-based entity extraction and multi-axis confidence scoring, eliminating manual audits and detecting unauthorized changes automatically.
- Engineered multi-step ETL pipeline with structured outputs (Pydantic + Instructor), model fallback strategies, multi-stage linking algorithm, and transformer-based NER (GLiNER) for data mining and entity profiling from unstructured text.

- Integrated knowledge graphs and observability systems for unified cross-source traceability.

LLM-Powered Cloud Remediation Workflow Generator

- Built AI microservice converting security policy violations into executable Kestra YAML workflows for AWS, GCP, and Azure — reducing remediation time from hours to minutes across 100+ security rules.
- Designed dual-stage LLM pipeline producing parameterized CLI commands and production-ready workflows with pre-check, execution, and post-check steps; developed async FastAPI service with secure auth and secret handling.

KEY PROJECTS

Aspect-based Sentiment Analysis, New Horizon College of Engineering [Demo Link](#) [Github](#) [Conference Paper](#)

- Built hybrid NLP sentiment classifier using dependency parsing, aspect identification, and polarity scoring, achieving >87% accuracy and also published findings in a conference paper.

DISTRIBUTED AI TRIP PLANNER - Multi-Agent System [Github](#)

- Architected distributed multi-agent system with 4 specialized agents coordinated by a central orchestrator via AG-UI, A2A, and MCP protocols; Next.js streaming frontend (real-time streaming chat, human-in-the-loop workflows) + FastAPI backend with sub-second response times.

Graph RAG [Github](#)

- Built Graph RAG system combining FAISS vector search, Neo4j graph traversal, and intent-based adaptive query routing for intelligent Q&A with citations over structured and unstructured data.
- Designed end-to-end pipeline: multi-format ingestion, context-aware chunking, entity/relationship extraction, and knowledge graph construction.

EDUCATION

B.E (Honors) in Artificial Intelligence & Machine Learning, New Horizon College of Engineering 2021 – 2025 CGPA: 9.49 Bengaluru, India

- Pursued a comprehensive curriculum in Artificial Intelligence and Machine Learning with focus on data science, deep learning, machine learning, and intelligent system design.

CONFERENCE PAPERS

- [Optimizing Urban Mobility a Comprehensive Public Transport Monitoring System](#)
- [Towards a Nuanced Sentiment Analysis: A Novel Hybrid Approach to Aspect-Based Insights](#)
- [Enhancing Neural Network with Quantum Computing](#)

ACHIEVEMENTS

- Secured 2nd place in 7-day Hackathon for presenting and implementing a working prototype at Manifest IT.
- Secured 1st place for Drone Project in senior category at Science Exhibition (Chinmaya Vidyalaya)
- Awarded Pratibha Puraskar & Medhavi Puraskar for exceptional academic performance
- Top 3 in SOF International Mathematics Olympiad (2×, School Level)
- Received Rajyapuraskar Certificate for excellence in Scouts & Guides
- NCC 'B' Certificate holder with training in leadership, discipline, and team management
